We add production value to events. We make a show out of regular old meetings. We are a one stop shop for all the equipment needed to put on first class presentations for corporate, business and non profit groups.

We have LCD projectors from small table top 2000 lumin units to projectors with interchangeable lenses capable of filling large theater screens with 12,000 lumens of light output. We have portable screens from 4' x 6' to 12' x 40' that can have the projector in front or behind the screen. A large assortment of computers, DVD players, Blu-ray players, and professional tape recorders are available to feed switchers and scalars to put your images on one or multiple screens at one time.

Everyone needs to hear your message. We have a large assortment of audio equipment to ensure everyone can hear you. We have wireless mics in handheld and lavaliere styles, small podium mics so everyone can see the speaker instead of someone standing behind a snake of chrome and black. We have plenty of speakers and amps to cover large rooms of more than 1500 people.

Lighting is an important part of any show. The audience needs to see the speaker, but also see any visual presentation. We have a large collection of theatrical lights with interchangeable lenses, controlled by dimmers, as well as moving lights and LED fixtures that can change color under computer control. To hang the lights we have simple floor stands, aluminum truss that can be hung or supported from the ground, on up to 40' x 40' truss structures for a large stage in a convention center.

Every stage needs a background. We have plenty of plain black drape and colored drapes to dress up a stage. We also have a 12' high screen that can be projected on to make your background be a video screen that can project any content that can be created on a computer. The content can change, move, have video windows, anything you can dream up!

Video can be an important part of a show. Often we will record a show for a DVD or for web casting. We also have a broadcast TV production truck with 6 cameras and equipment to record large events or use the video as speaker reinforcement on large screens in the presentation room.

We also carry many additional support items. We have teleprompters so your speakers can look at the audience instead of their notes, and keep rambling speakers on their time line. We have live plants available to decorate the stage. We have registration counters with light boards above for signs. We have decorative lighting spandex tubes, and wall wash LED par cans to change the mood of a room. We have pipe and drapes to make more than 50 exhibit booths.

Most important, we have a staff of video and computer graphics professionals that will work with you. You tell us what you want and we will make it happen. We will figure out the logistics of moving in and out, how much space is needed, what equipment is needed and add extras we have learned will make better shows, like remote mice and LCD monitors so your speaker can see what is behind them. We add production value to your show, including arranging how speakers enter, having videos cued up so no one sees your desk top, and using creative lighting to show off your event. We make a show out of your meeting.

We are based in San Luis Obispo and enjoy working in the various spaces of the Tri County, central California area. We also travel many times a year to hotels and convention centers from Reno, NV to San Diego, CA, with many stops in between to produce shows. We are happy to travel where ever your meeting is held.
